

Rise and Decline of Muslims

Monday, April 20, 2026

Dr. Yasir Mehboob

NUST, Pakistan

yasir_jrp@hotmail.com

بسم الله الرحمن الرحيم

"During all the first part of the Middle Ages, no other people made as important a contribution to human progress as did the Arabs, if we take this term to mean all those whose mother-tongue was Arabic, and not merely those living in the Arabian peninsula. For centuries, Arabic was the language of learning, culture and intellectual progress for the whole of the civilized world with the exception of the Far East. From the IXth to the XIIth century there were more philosophical, medical, historical, religious, astronomical and geographical works written in Arabic than in any other human tongue.“

Phillip Hitti in 'Short History of the Arabs.'

The Fall of Constantinople and Europe's Dilemma

- The fall of Constantinople in 1453 placed Europe between the anvil and the hammer. On one side, the Ottomans had seized the Bosphorus and locked the eastern land and sea routes, tightening their grip on the flow of goods into Europe. On the other, the Venetian merchants controlled Mediterranean trade, driving up costs and deepening Europe's dependence. Europe found itself in an increasingly suffocating position, with no room to maneuver along its traditional trade routes.
- Europe's most goods were all originated from the East, from India, China, and the lands beyond. The East was the sole origin, and the routes connecting it to Europe were therefore not merely commercial corridors — they were lifelines. This was a crisis of survival.

What options were realistically available to European nations at the time?

THE WORLD ACCORDING TO CHRISTOPHER COLUMBUS c.1490

WORLD HISTORY ENCYCLOPEDIA

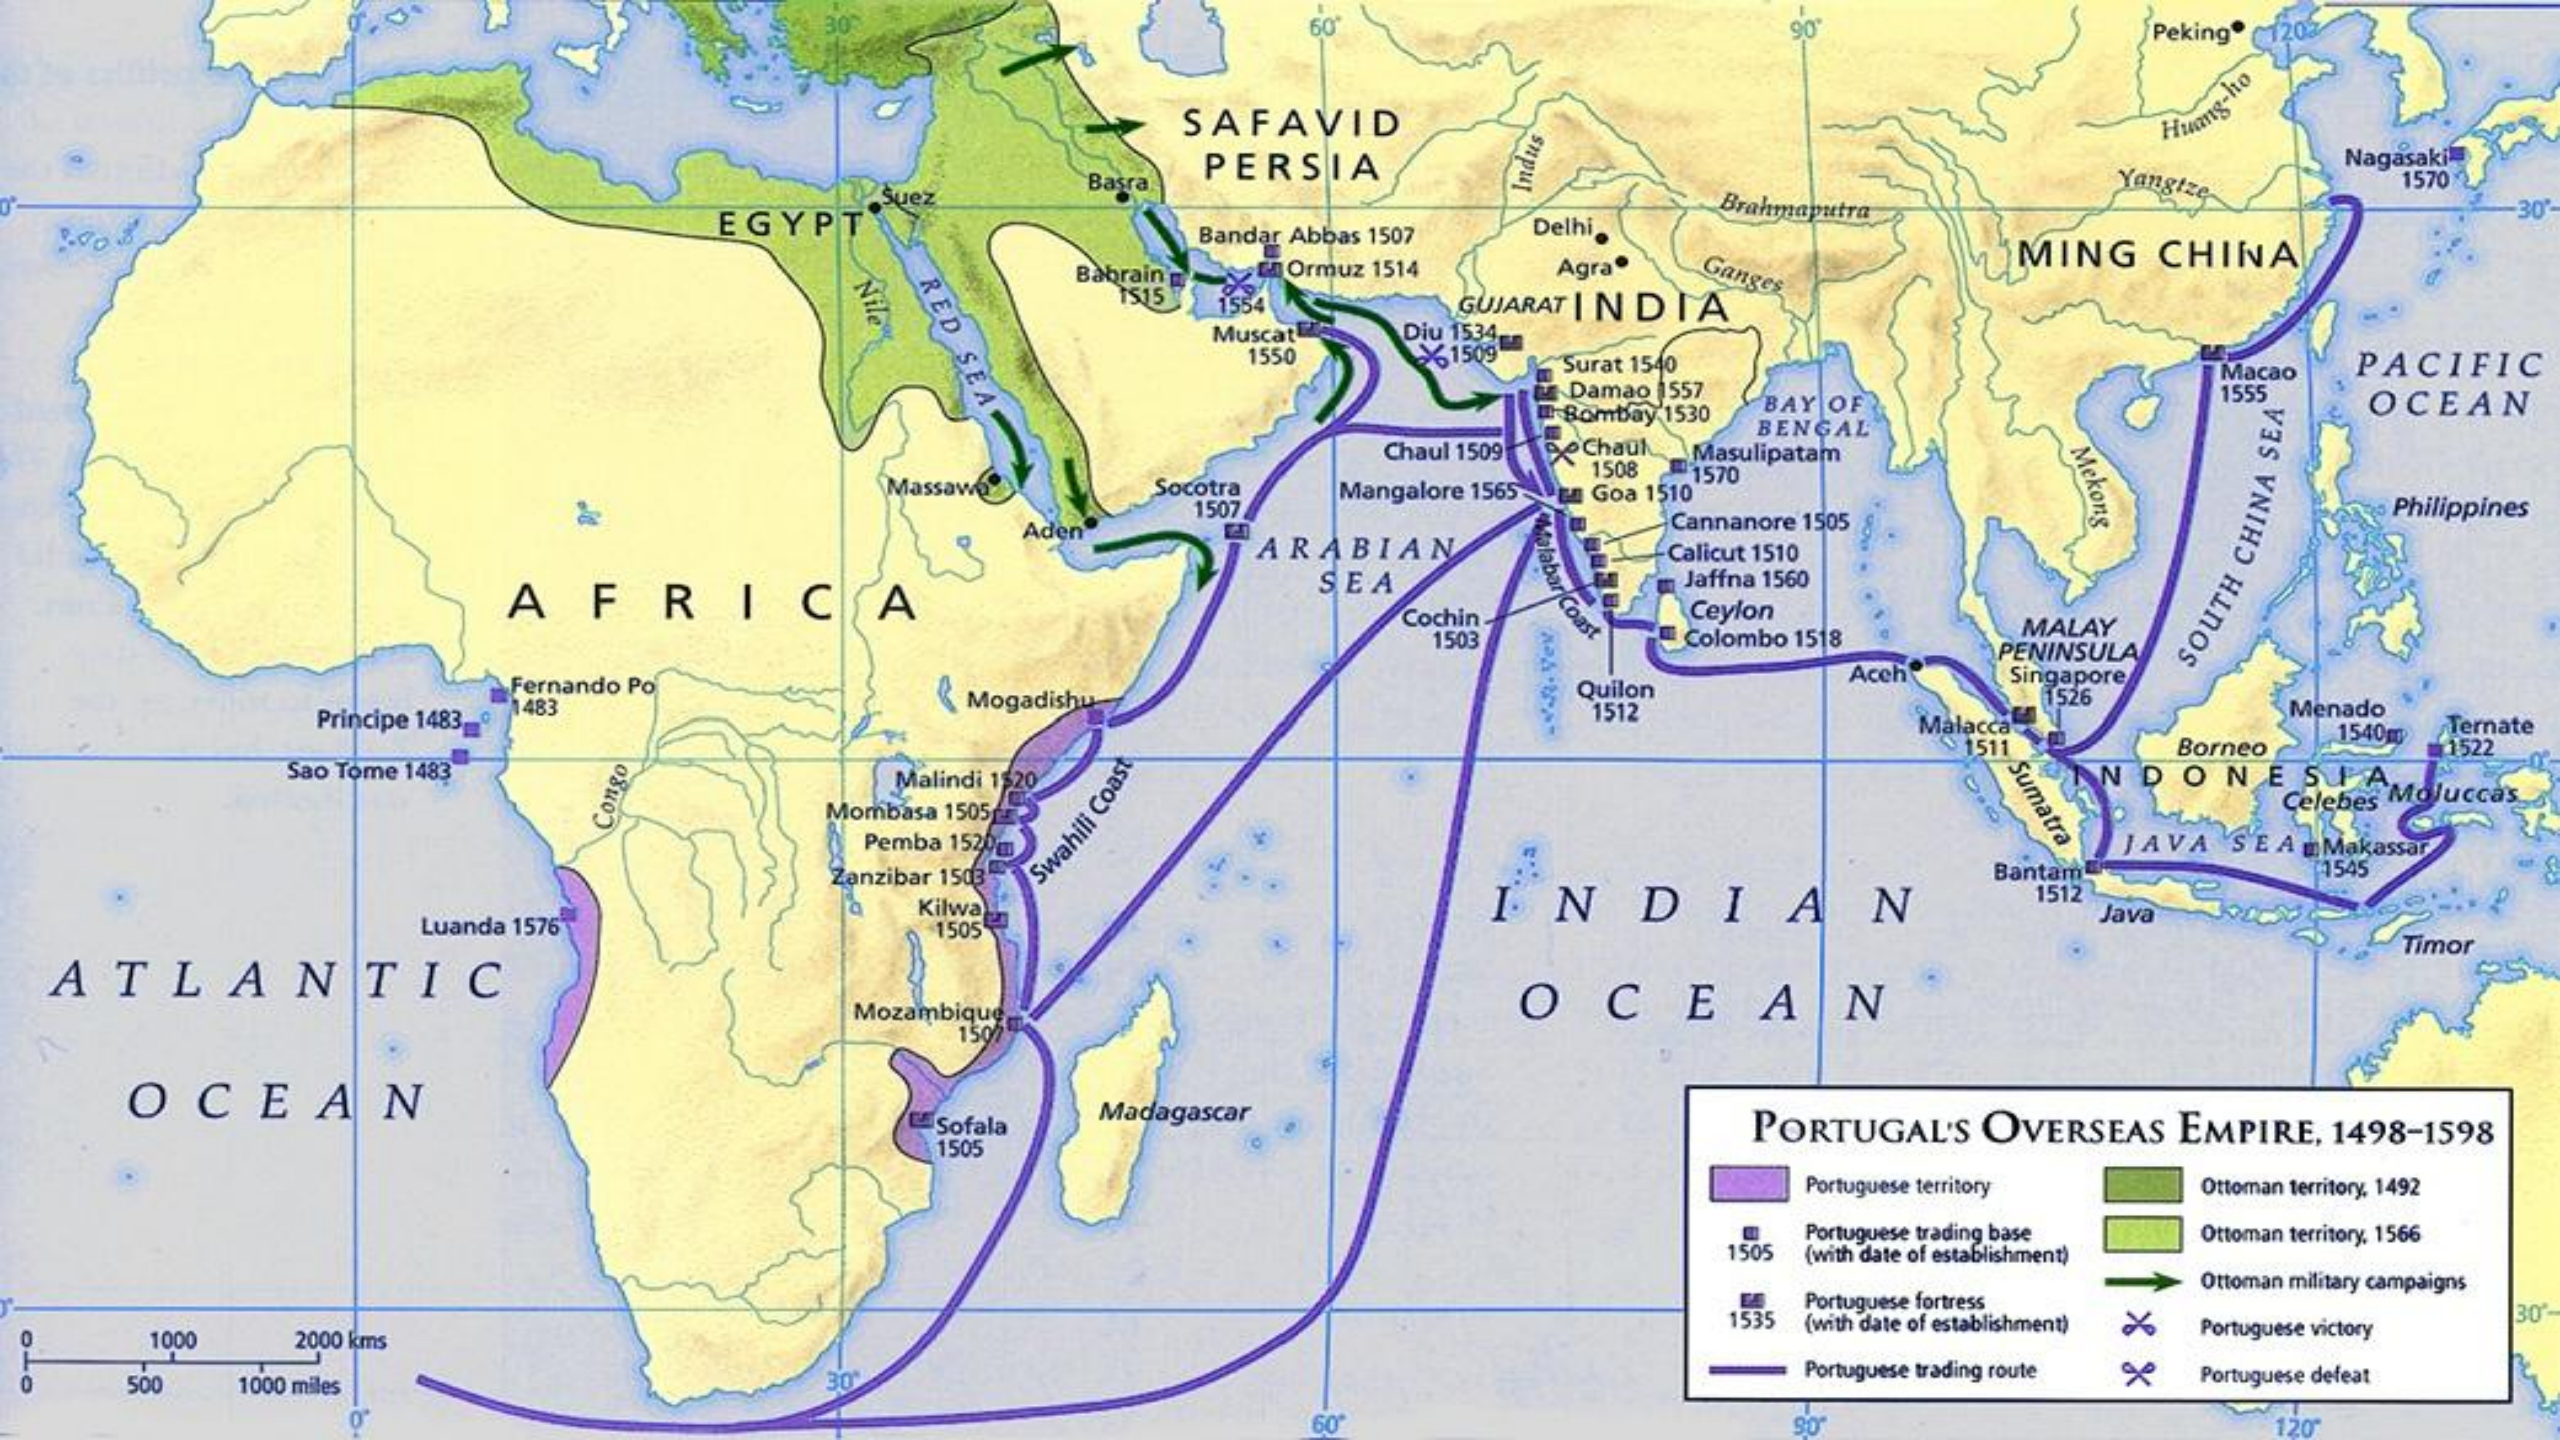

The 1453 Catalyst and the Shift to the Atlantic

The fall of Constantinople in 1453 served as the definitive catalyst for the European Age of Discovery. By gaining control of the Bosphorus, the Ottomans effectively controlled the trade to and from Europe. This shift had profound psychological and intellectual implications. Europe saw this change as an increasingly expensive and precarious environment, and started looking outward not by choice, but by necessity. The quest for a direct route to India was a strategic attempt to bypass the Ottoman-Venetian monopoly on the spice trade.

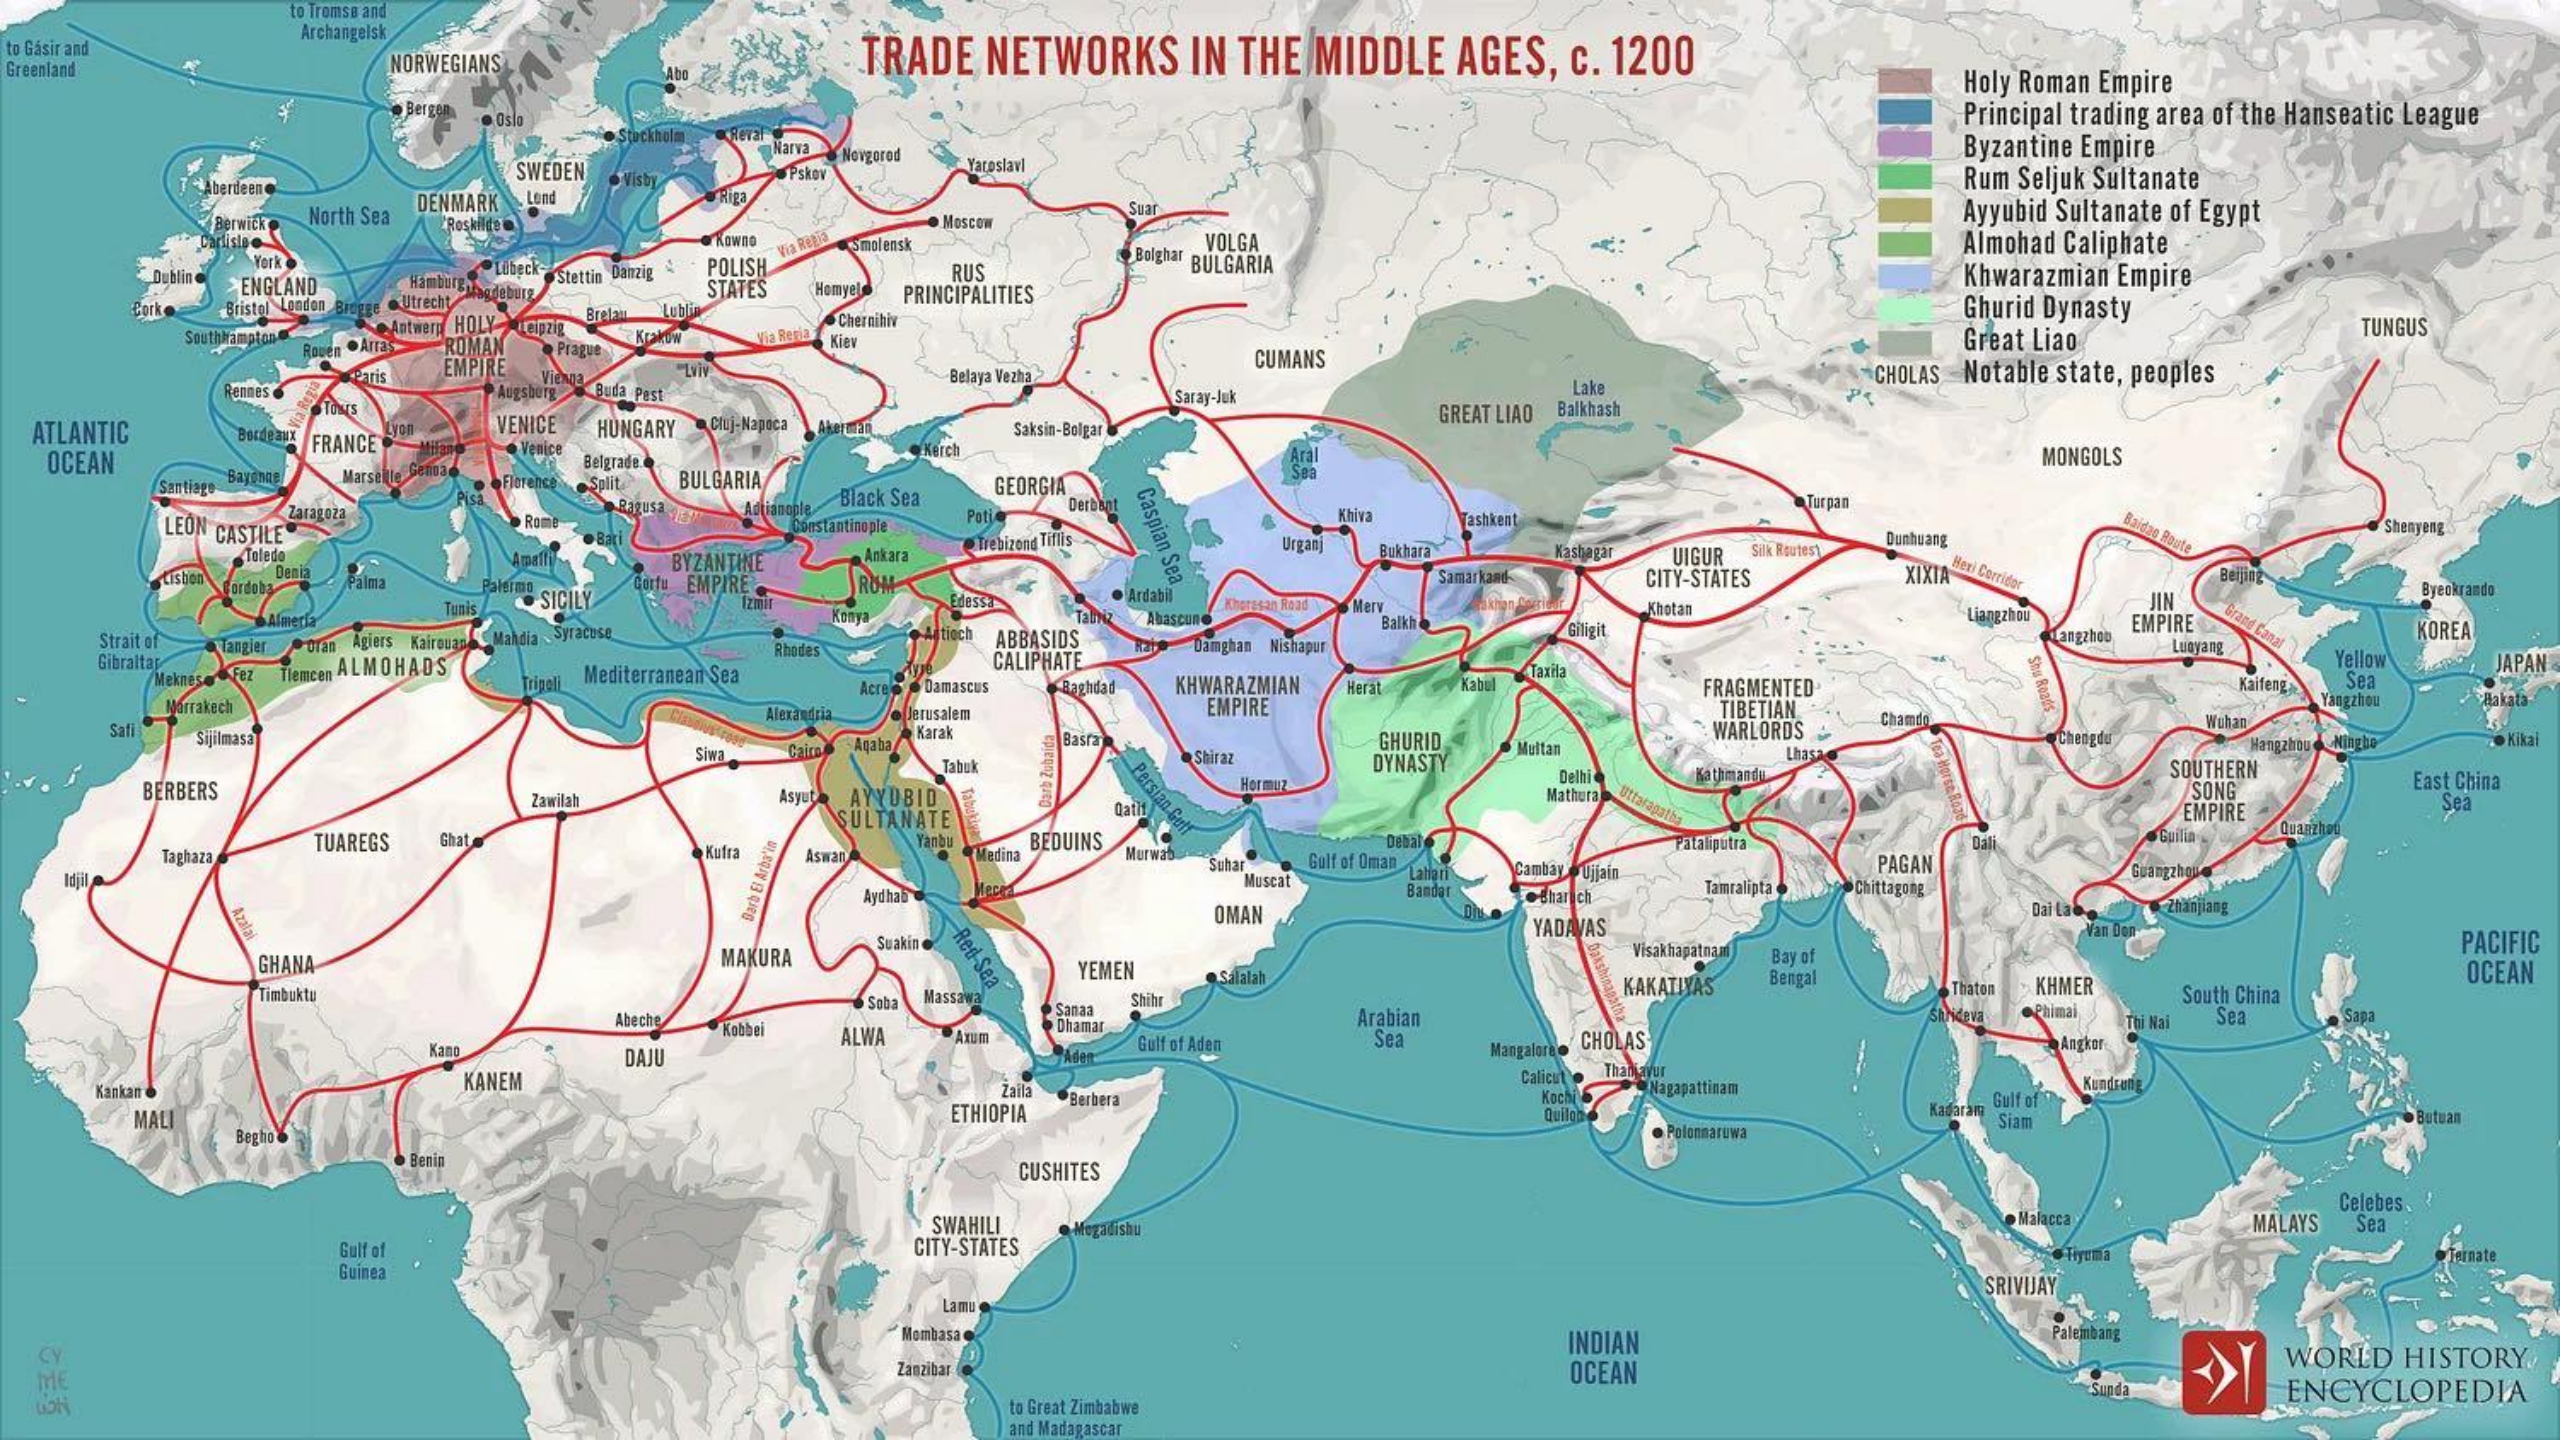

What to do now?
There is a continent in between.

The quest for this single discovery will change many other aspects beside the trade.

ALL OF THE WORLD'S

Silver Reserves

Key			
	Silver (AG)		Silver and other metals AU (gold), CU (copper), PB (lead), ZN (zinc)

The Silver Shock

The discovery of Americas unleashed an unprecedented flow of New World silver, and add to it the mighty reserves of south African gold, these two fundamentally altered the global economy. The massive extraction of gold and silver from mines in American continent provided the liquid capital necessary for European state-building and industrial investment, but at the same time, it acted as a destabilizing force for the land-based empires of the East. The Ottoman monetary system, which was heavily reliant on silver, was severely undermined as the sudden abundance of New World silver decreased the metal's value relative to gold. This led to runaway inflation, the closing of Ottoman mines that could no longer compete with Potosí, and the influx of substandard European coinage like the Dutch lion dollar and the Spanish real.

The Silver Shock

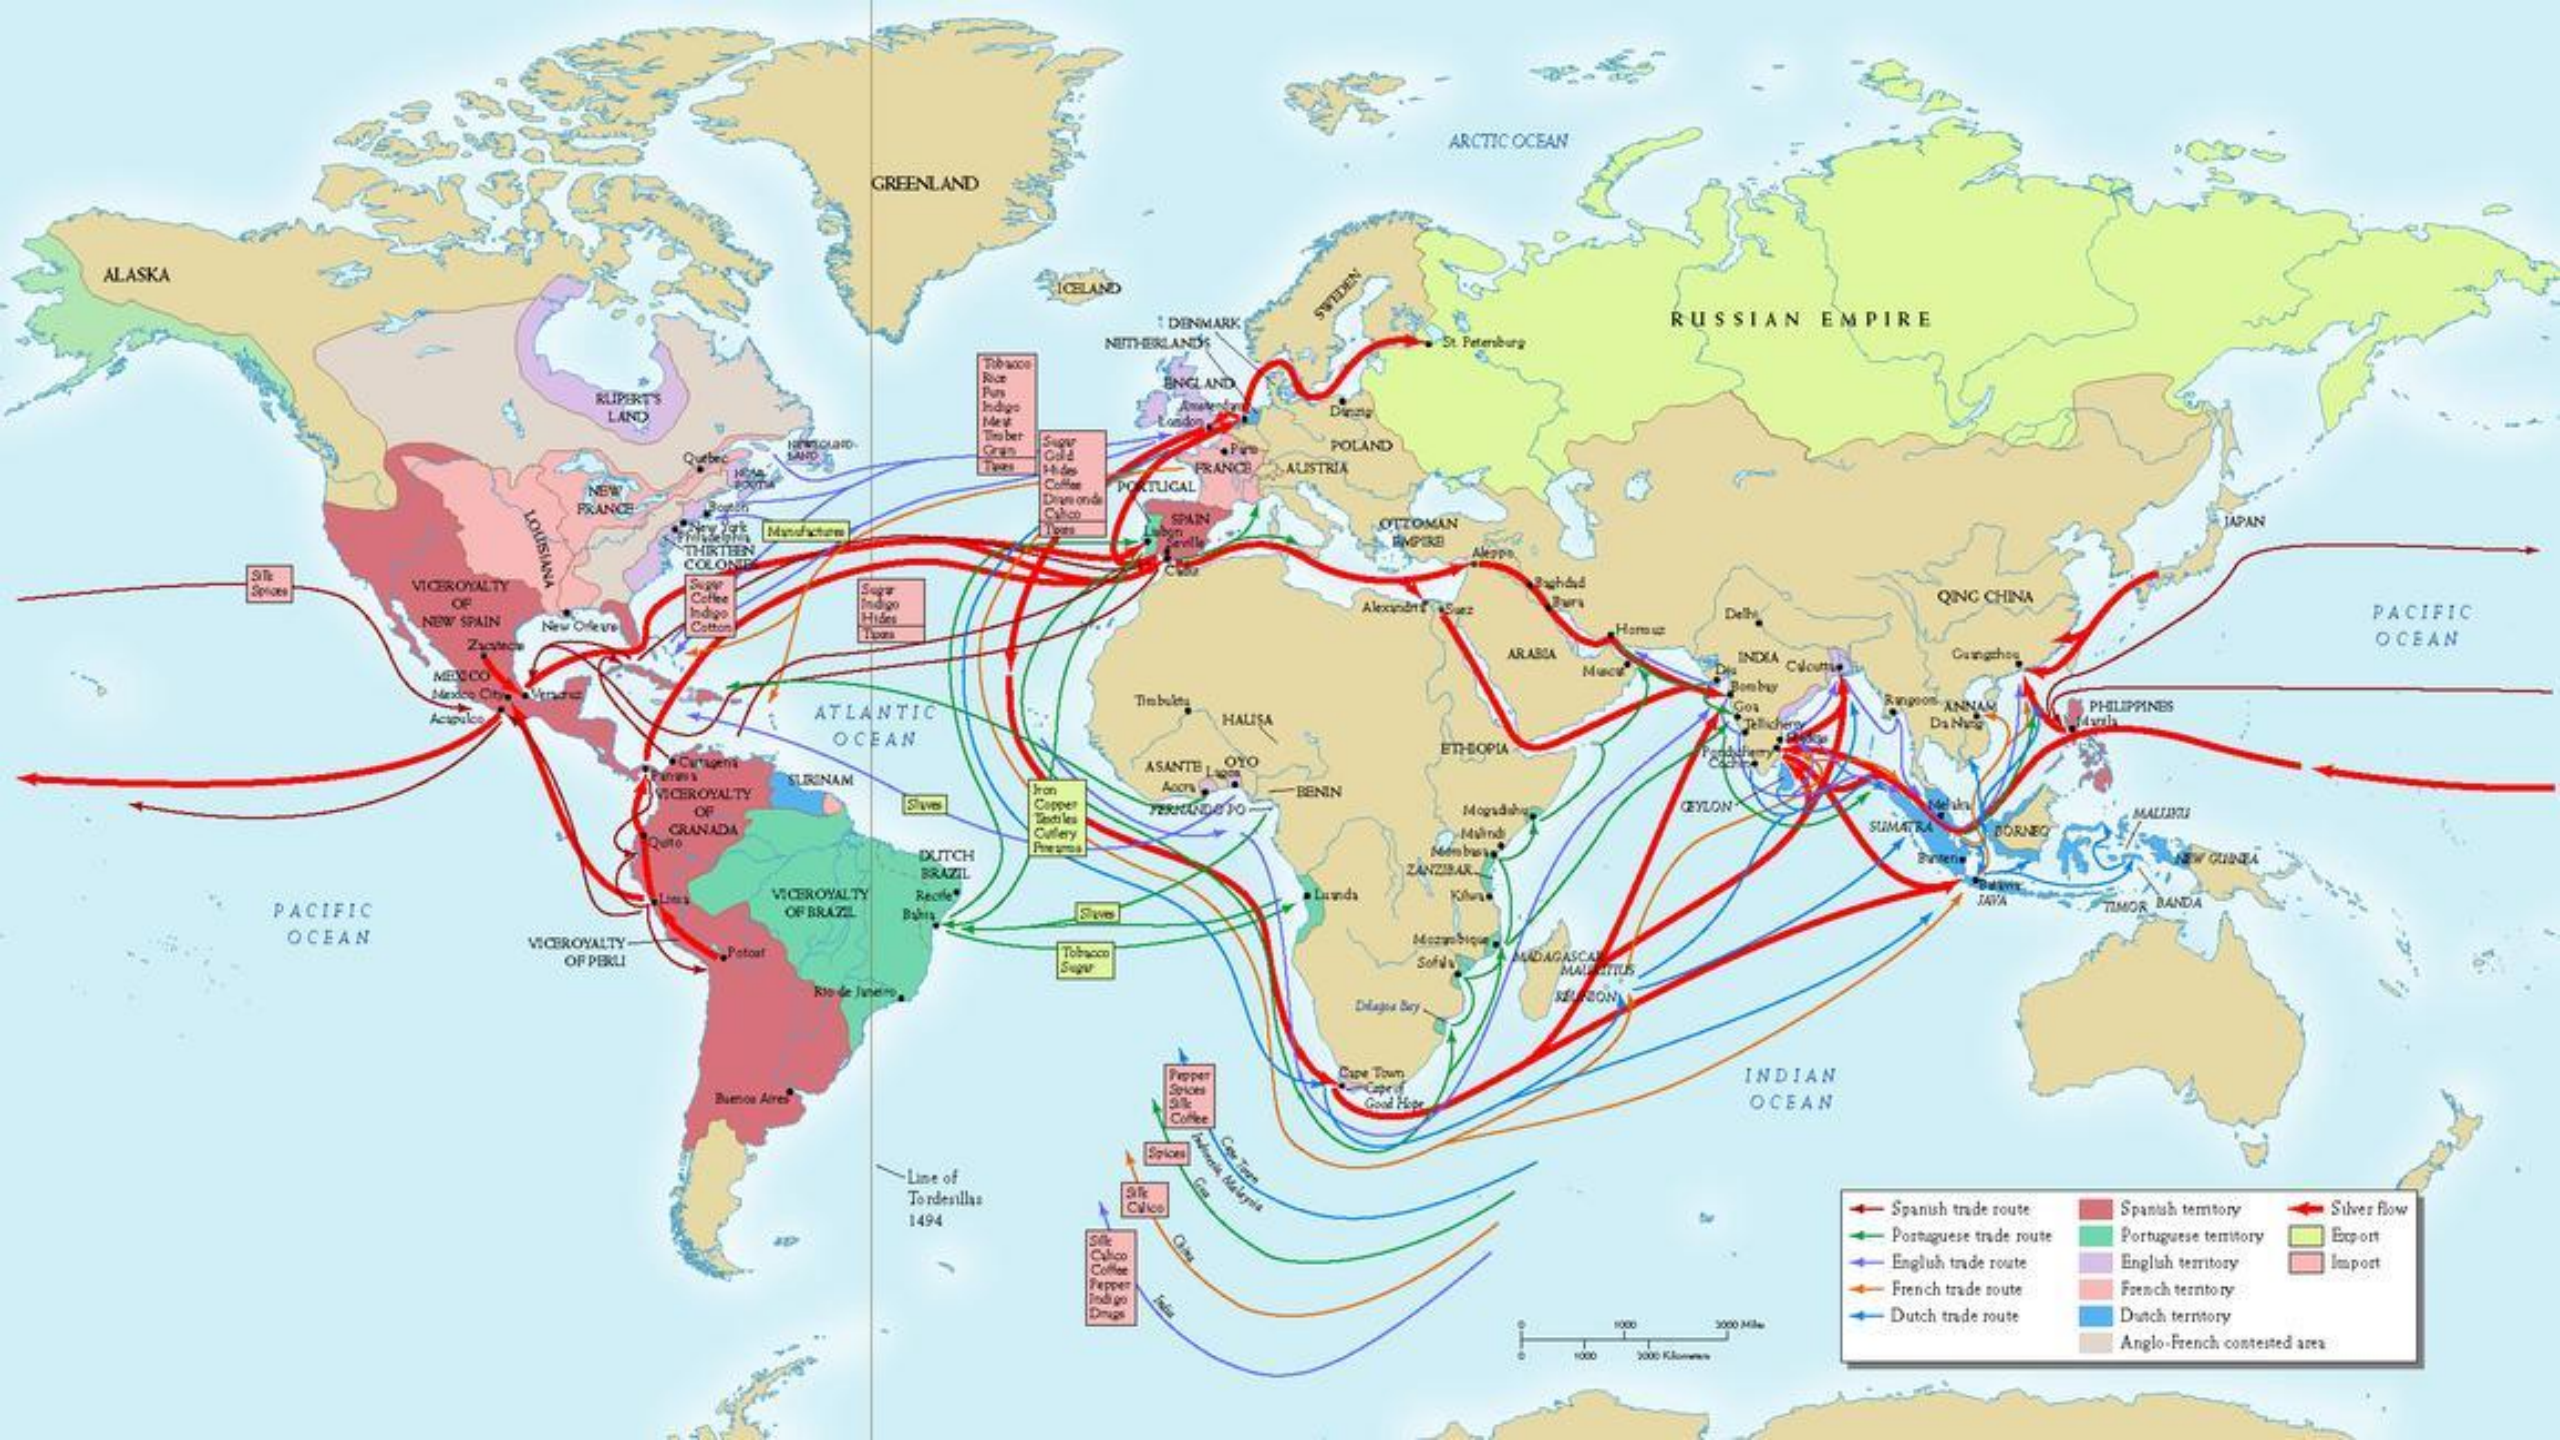

In the Mughal Empire, the effects were equally complex. The inflow of silver, brought by European traders in exchange for high-quality cotton textiles, ensured that the empire had a steady supply of metal for its silver rupiya currency. This initially fueled an economic boom, with the economy reaching hundreds of millions of rupees per year. However, the dependence on foreign bullion meant that the Mughal economy became increasingly integrated into a global trade network it did not control. As European maritime prowess surpassed that of the Mughals, England and France began to dominate the trade routes, eventually drawing off wealth from the Indian core to the European periphery.

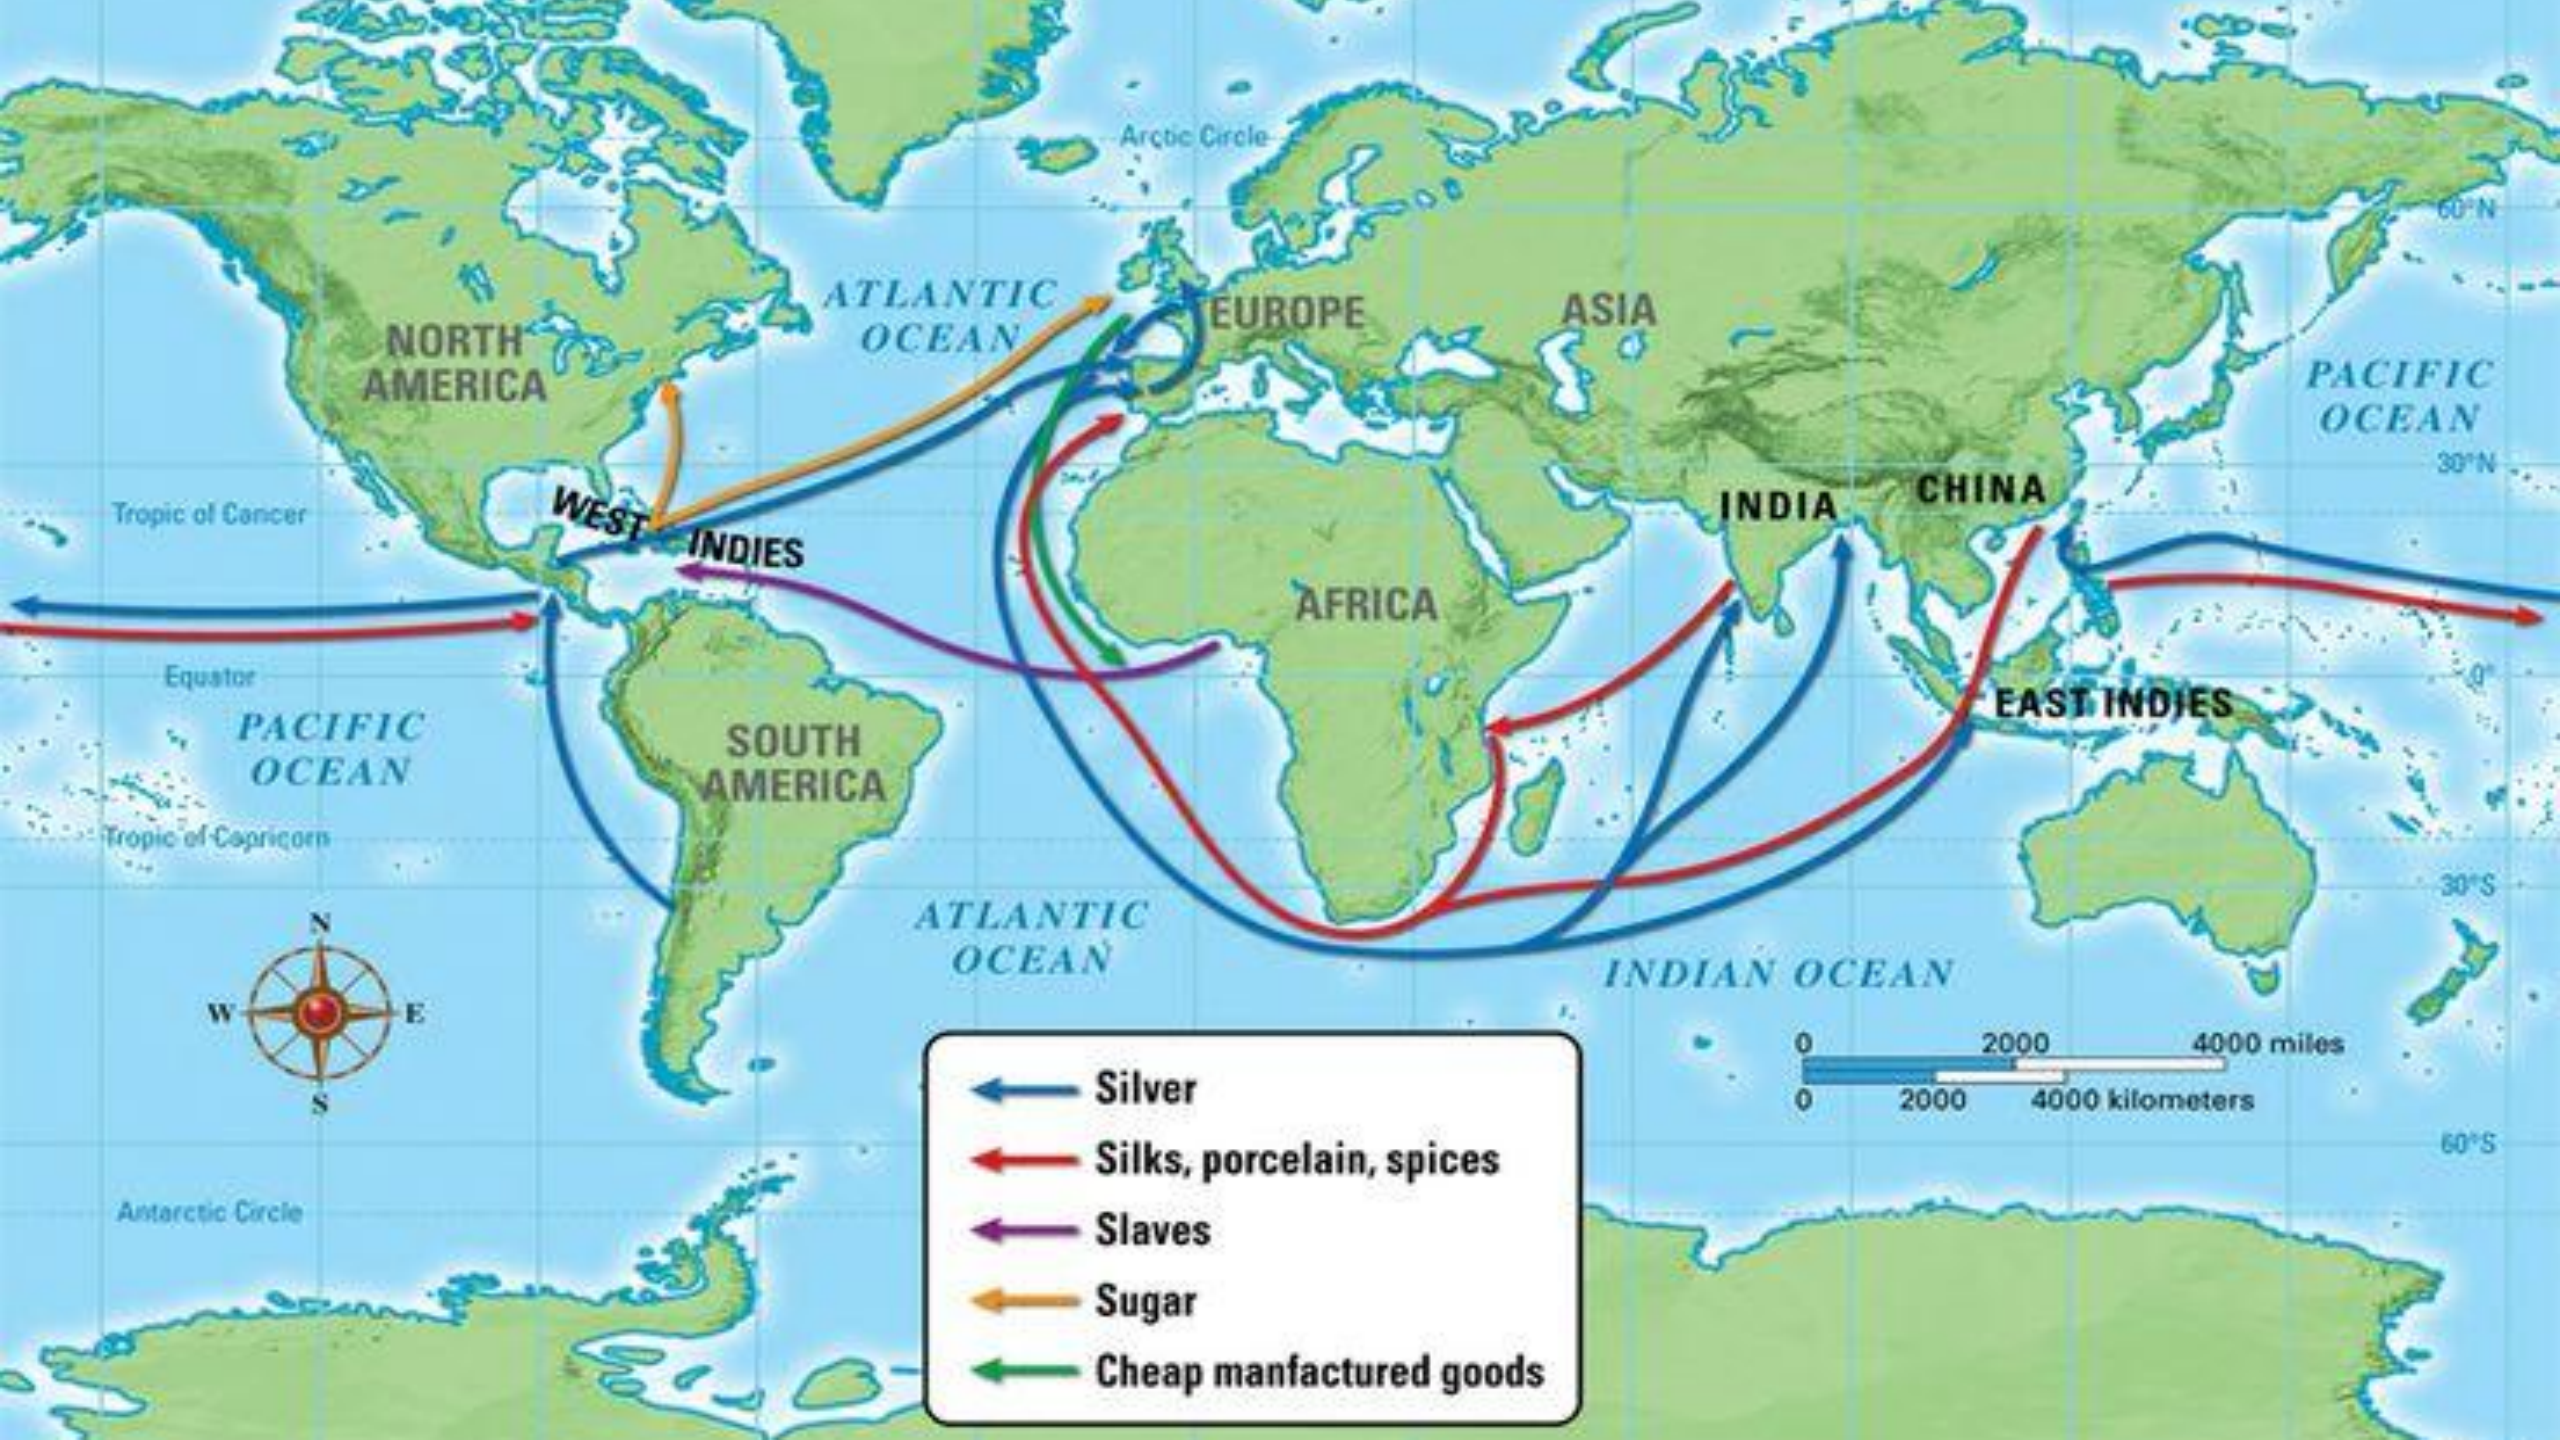

The Silver Shock

This influx of silver and didn't spare China and other east Asian nations from dipping deep in the financial abyss. Kenneth Pomeranz argues that by the late eighteenth century, both England and the Yangtze Delta were facing severe land constraints and ecological pressures. However, Europe's discovery of the Americas provided a massive source of primary products—cotton, sugar, timber, and tobacco—that relieved the pressure on its own land, allowing labor to shift from agriculture to manufacturing. In contrast, the East Asian cores remained trapped in a labor-intensive dead end, where population growth led to smaller land holdings and diminishing returns on labor.

Financial Dependency of East

The Ottoman state attempted to respond through the Tanzimat reforms (1839–1876), a comprehensive modernization of the military, legal, and administrative systems modeled after Western practices. However, these reforms were extremely costly and were pursued during a period of declining tax revenue and unfavorable trade agreements, such as the Baltalimani Treaty of 1838, which granted trade privileges to Britain and abolished local monopolies. To fund these modernization efforts and the costs of wars (such as the Crimean War of 1853-56), the empire turned to external borrowing from European financiers.

Financial Dependency of East

The resulting ‘borrowing frenzy’ culminated in the financial collapse of the empire. In 1881, under the Decree of Muharrem, the Ottoman government was forced to cede its fiscal sovereignty to the Ottoman Public Debt Administration (OPDA), an organization controlled by British, French, and other European creditors. The OPDA became a ‘vast, essentially independent bureaucracy within the Ottoman bureaucracy’, collecting taxes on essential commodities—salt, silk, tobacco, and alcohol—and funneling them directly to foreign bondholders. This peripheralization of the Ottoman economy ensured that it remained a source of raw materials for the industrial West rather than a competitor.

The Trade and the Competition

Pre-colonial Conflicts

- **Thirty Years' War**, series of European conflicts lasting from **1618 to 1648**, involving most of the countries of western Europe, and fought mainly in Germany. At first the struggle was primarily based on the profound religious antagonism engendered among Germans by the events of the Protestant Reformation. Religious animosity, especially among non-German adherents of the contending Protestant and Roman Catholic factions, broadened the war and was a substantial factor in its later stages.

- **Peace of Westphalia,** treaty, signed October 24, **1648**, that closed the Thirty Years' War and readjusted the religious and political affairs of Europe. It is so called because the negotiations, which began in 1644, took place in the German cities of Münster and Osnabrück, in Westphalia. The main participants were France and Sweden and their opponents Spain and the Holy Roman Empire. By the terms of the treaty, the sovereignty and independence of each state of the Holy Roman Empire was fully recognized, making the Holy Roman emperor virtually powerless. The Peace of Westphalia, signed at Münster on October 24, 1648, fundamentally influenced the subsequent history of Europe. In addition to establishing Switzerland and the Dutch Republic (the Netherlands) as independent states, the treaty gravely weakened the Holy Roman Empire and the Habsburgs, ensured the emergence of France as the chief power on the Continent, and disastrously retarded the political unification of Germany.

Pre-colonial Conflicts

- **English Revolution**, also called the Puritan Revolution, general designation for the period in English history from **1640 to 1660**. It began with the calling of the Long Parliament by King Charles I and proceeded through two civil wars, the trial and execution of the king, the republican experiments of Oliver Cromwell, and, ultimately, the restoration of King Charles II.

The Military Revolution

The sixteenth and seventeenth centuries witnessed a Military Revolution that further separated the capabilities of West and East. Geoffrey Parker argues that four key innovations transformed European warfare: the replacement of lance and pike by firearms, a tenfold increase in army size, the adoption of more complex strategies, and the development of the *trace italienne* (new castle architecture suitable to sustain artillery).

The Military Revolution

The *trace italienne*, or artillery fortress, was a response to the devastating power of siege cannons, primarily employed by Ottomans. These low, thick-walled, star-shaped fortifications shifted the balance back to the defensive, making wars into protracted sieges that required enormous logistical trains and massive manpower to sustain. Because these fortifications were incredibly expensive, only the most efficient states could afford to build and man them. This forced European monarchs to reorganize their administrations, moving away from household-based systems toward professional bureaucracies capable of managing national taxation and long-term debt.

The Military Revolution

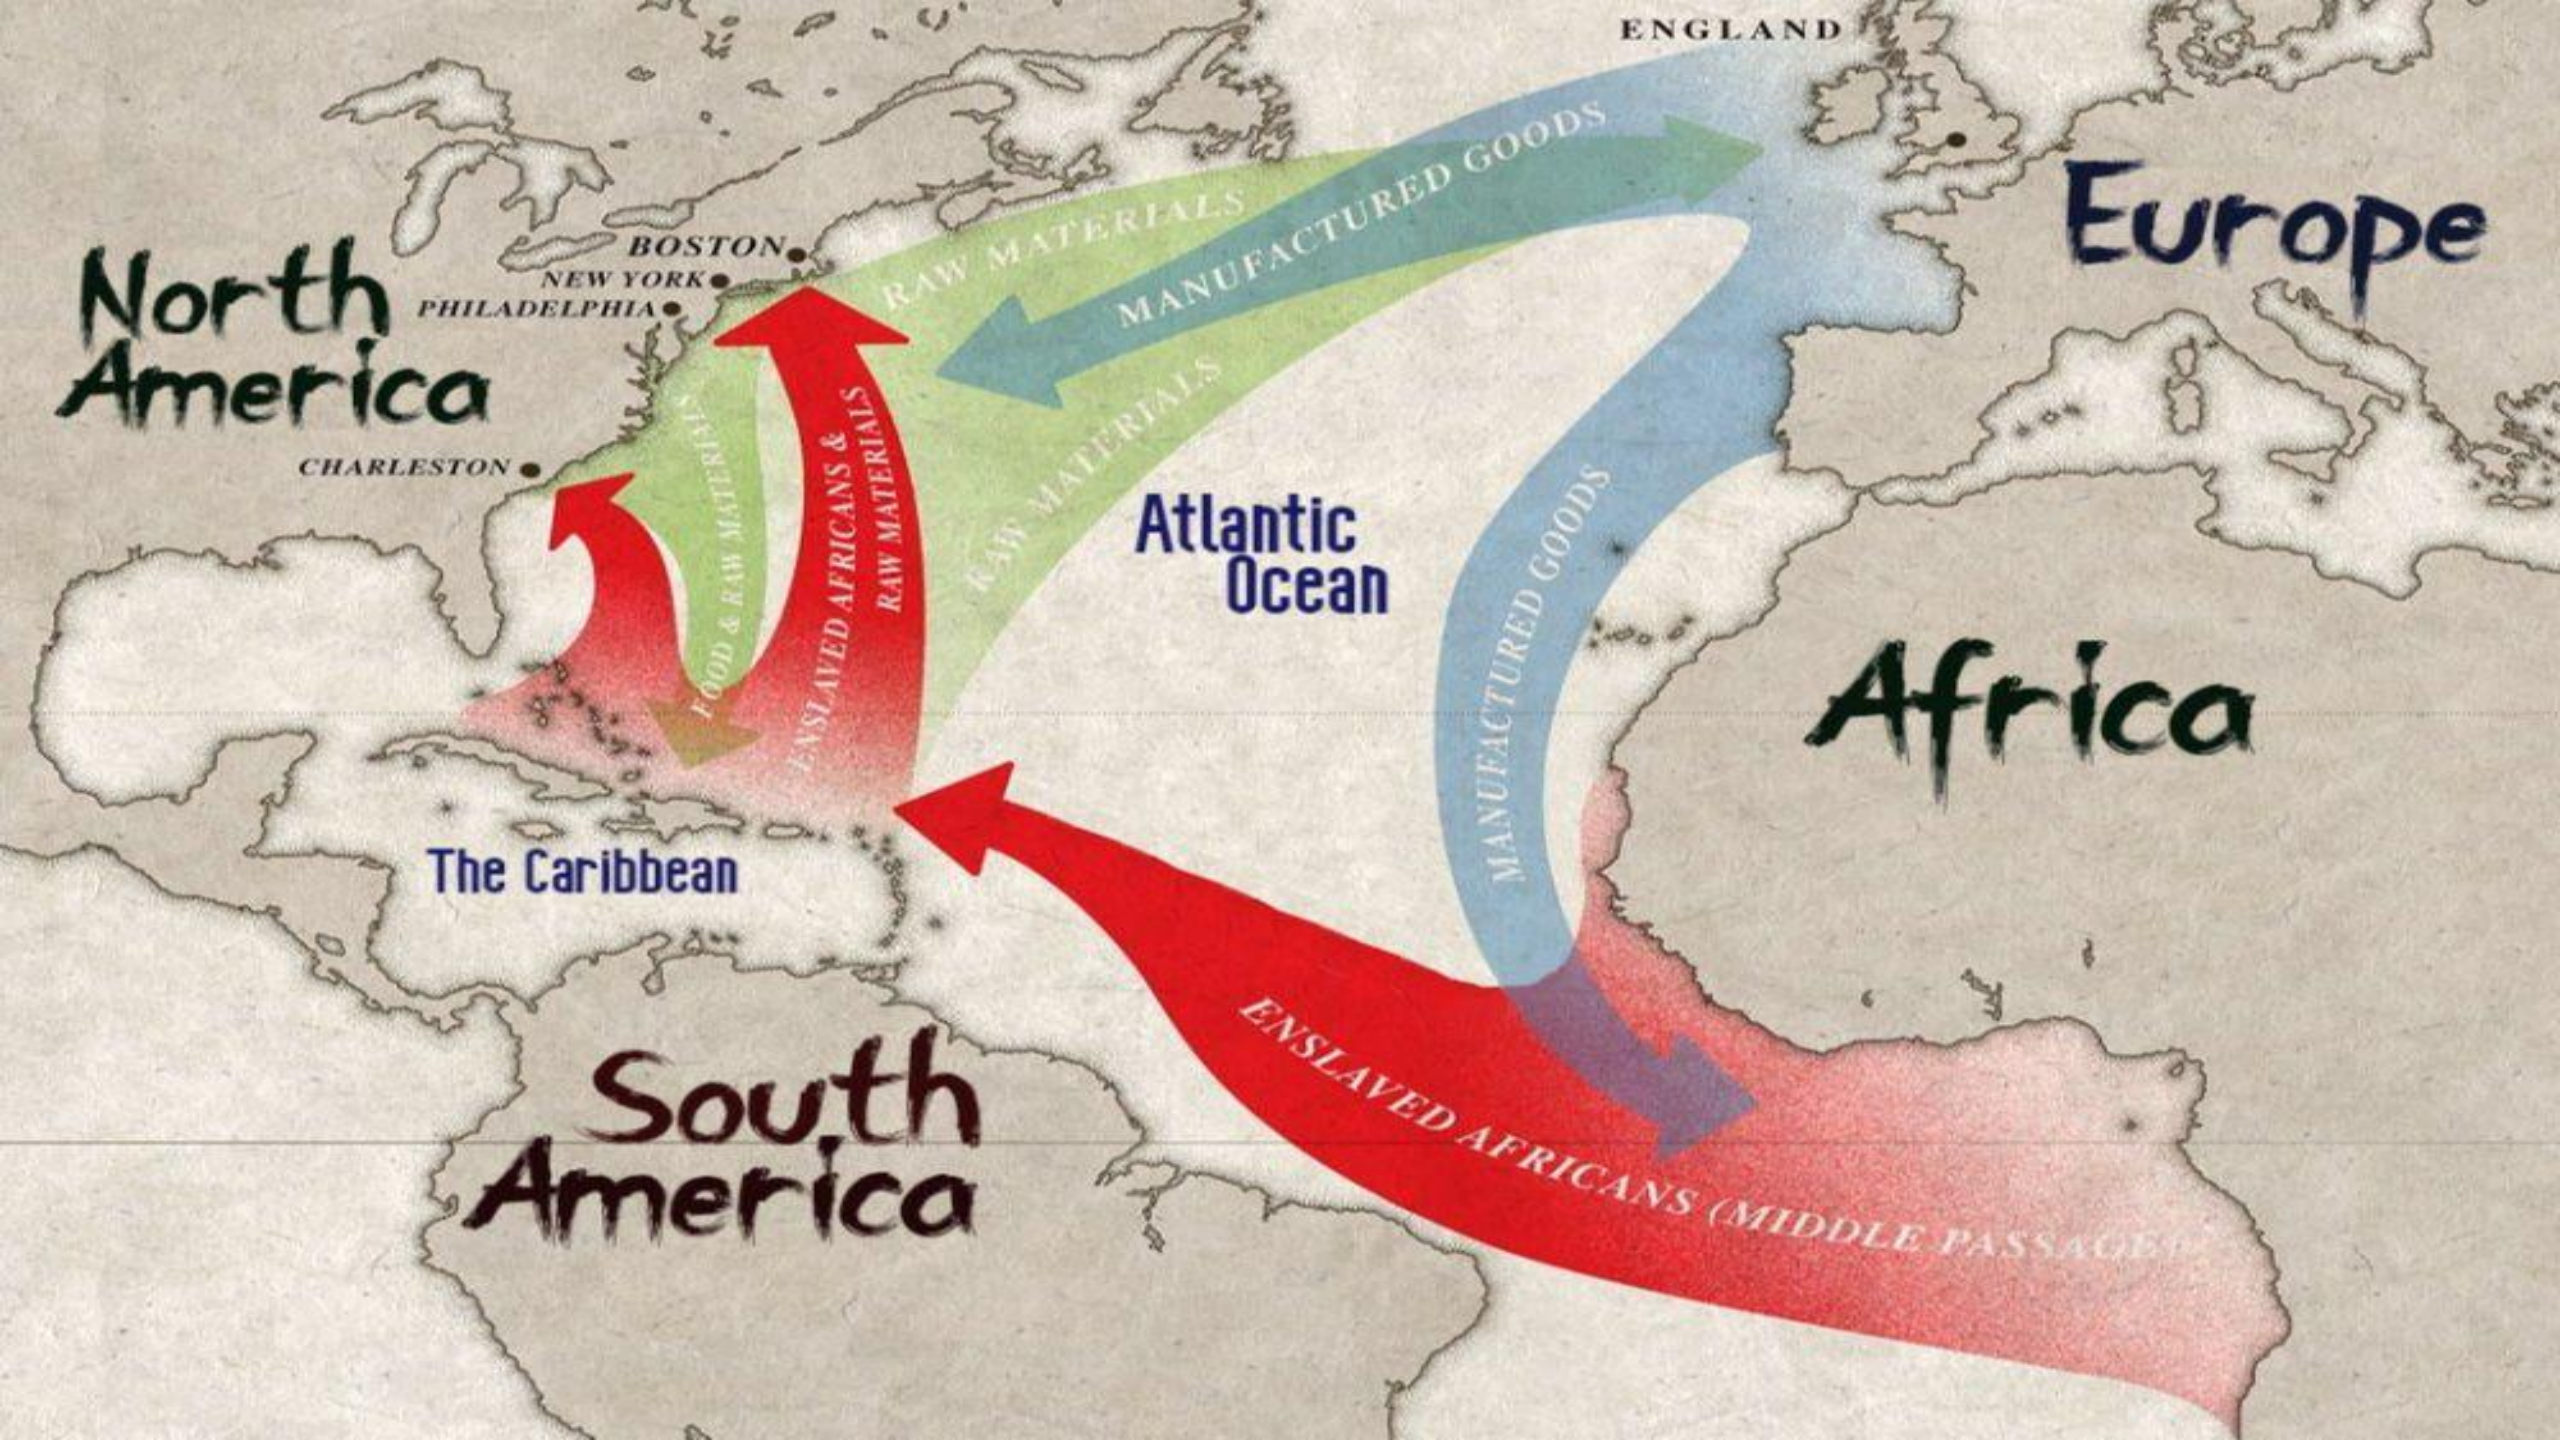

The Ottoman and Mughal empires, while early adopters of gunpowder, failed to institutionalize the military revolution to the same degree. The Ottoman siege train remained the finest in the world through the mid-sixteenth century, but the empire's military structure remained relatively static compared to the rapid iterative changes in the West. The Janissaries, once a force for innovation, became a reactionary 'state within a state', resisting changes to their organization and blocking efforts to modernize the army. By the time the *trace italienne* spread through Central and Western Europe, the cost of besieging these modern fortresses became prohibitive for the Ottoman treasury, leading to the strategic stalemate at the frontiers and the eventual defeat at the gates of Vienna in 1683.

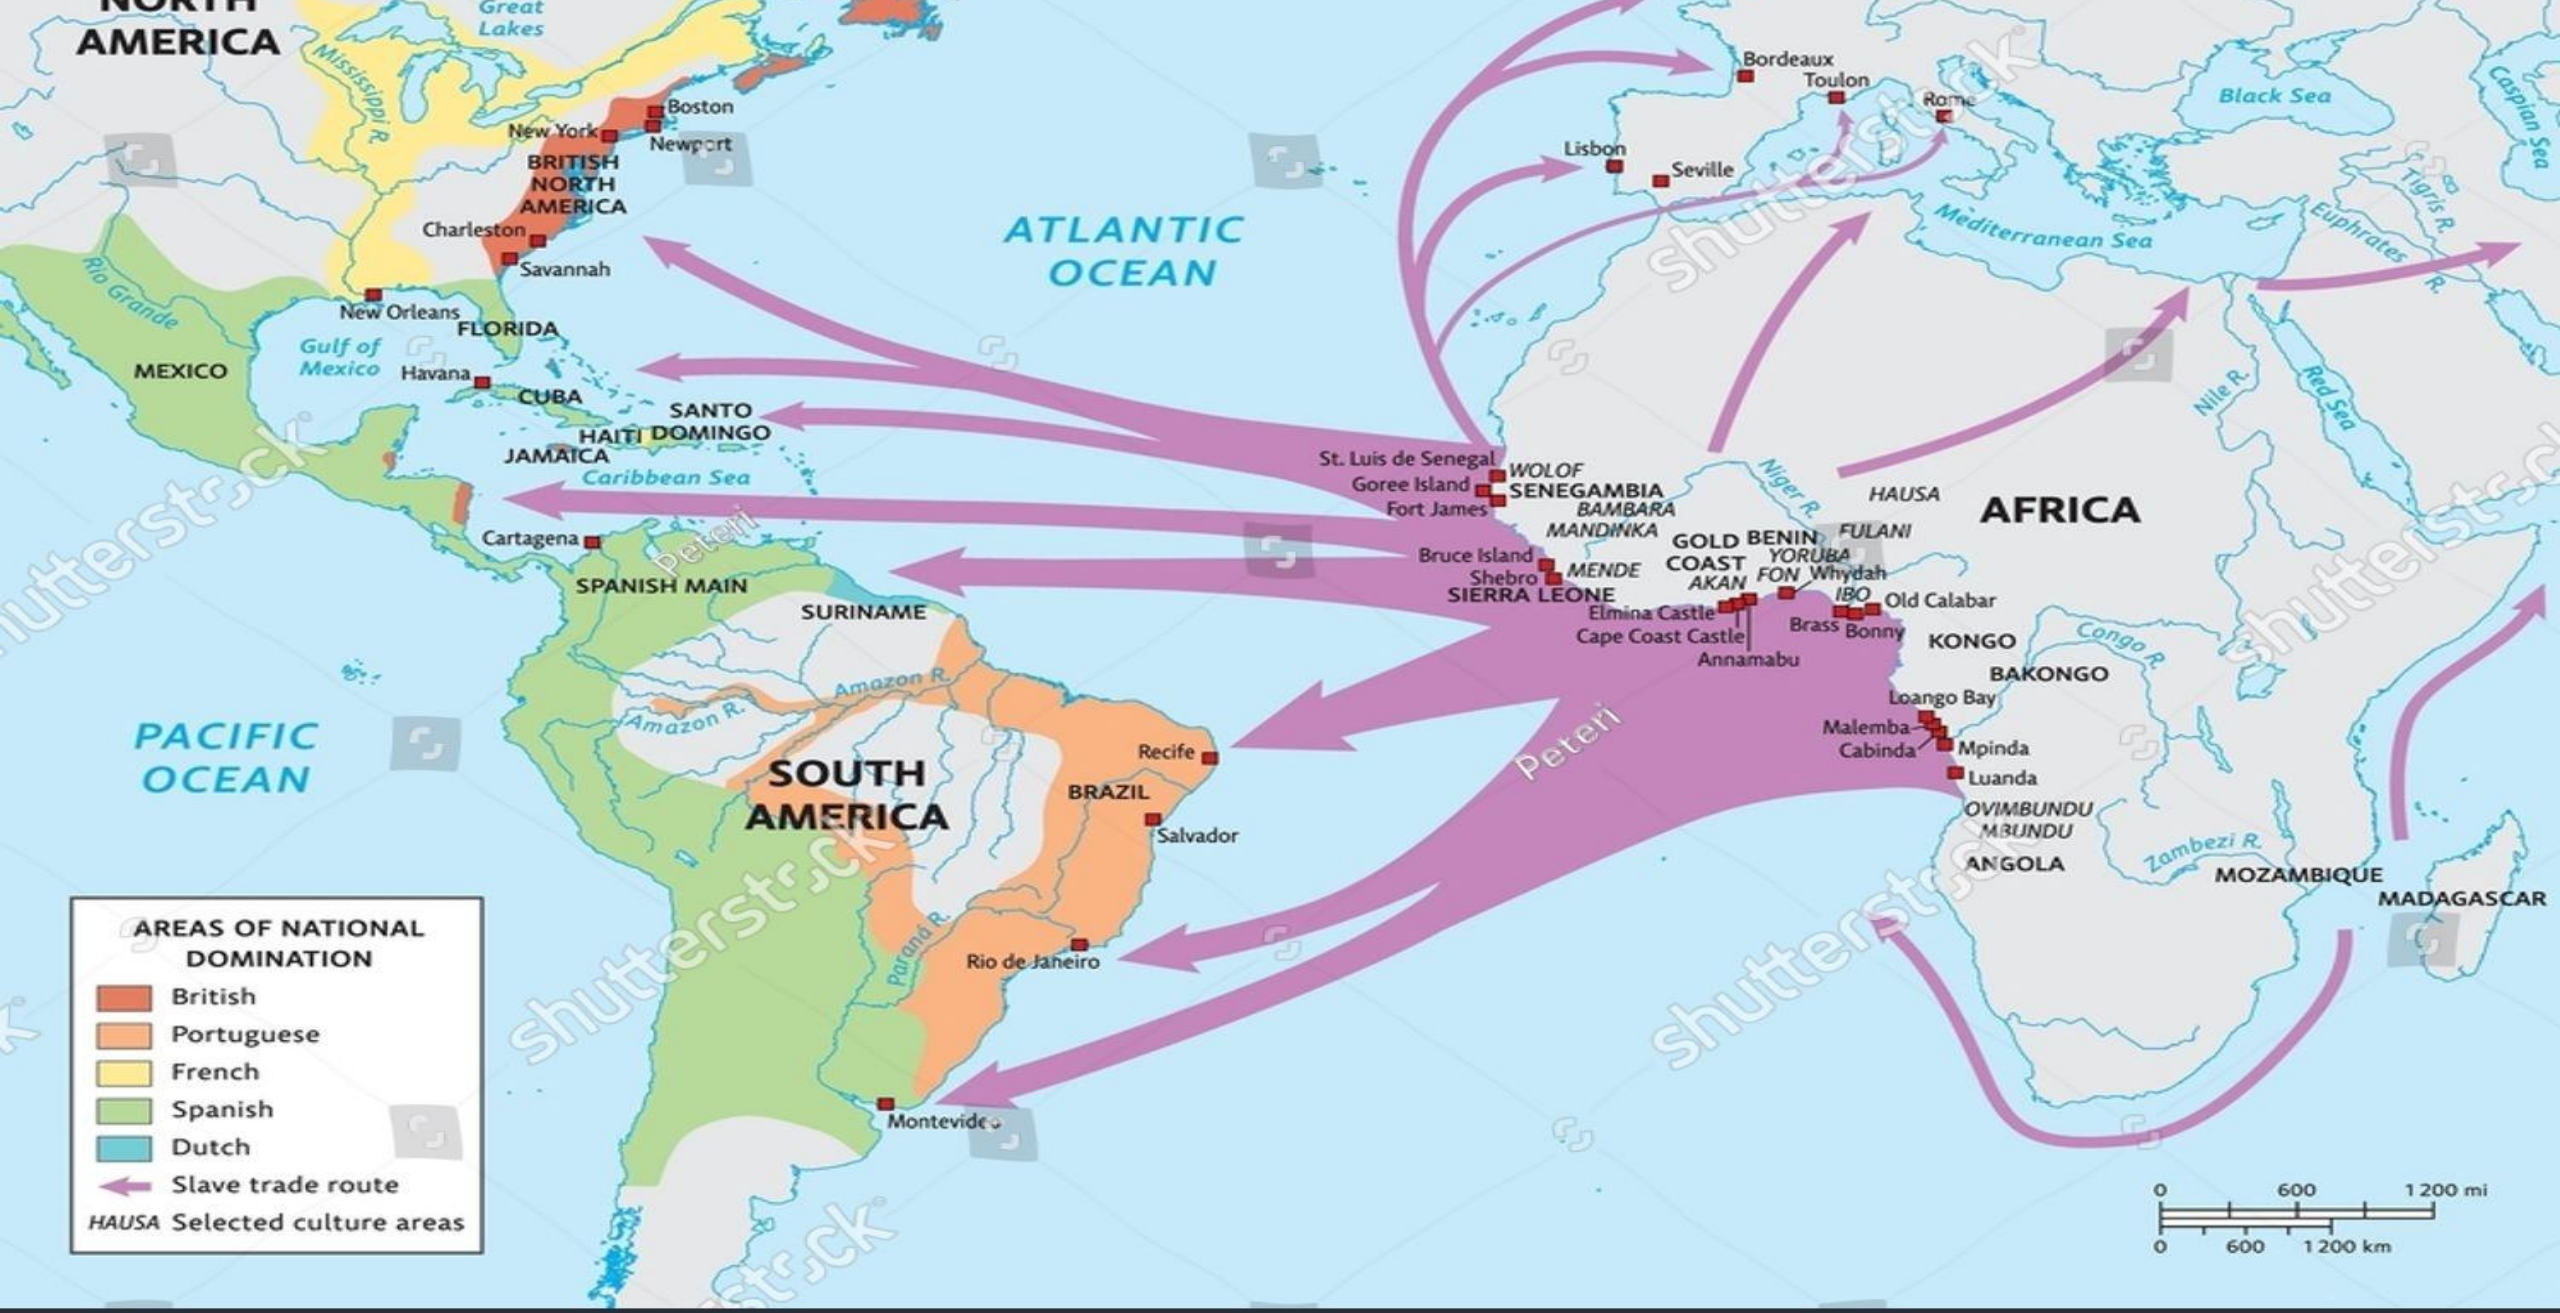

Colonial Conflicts

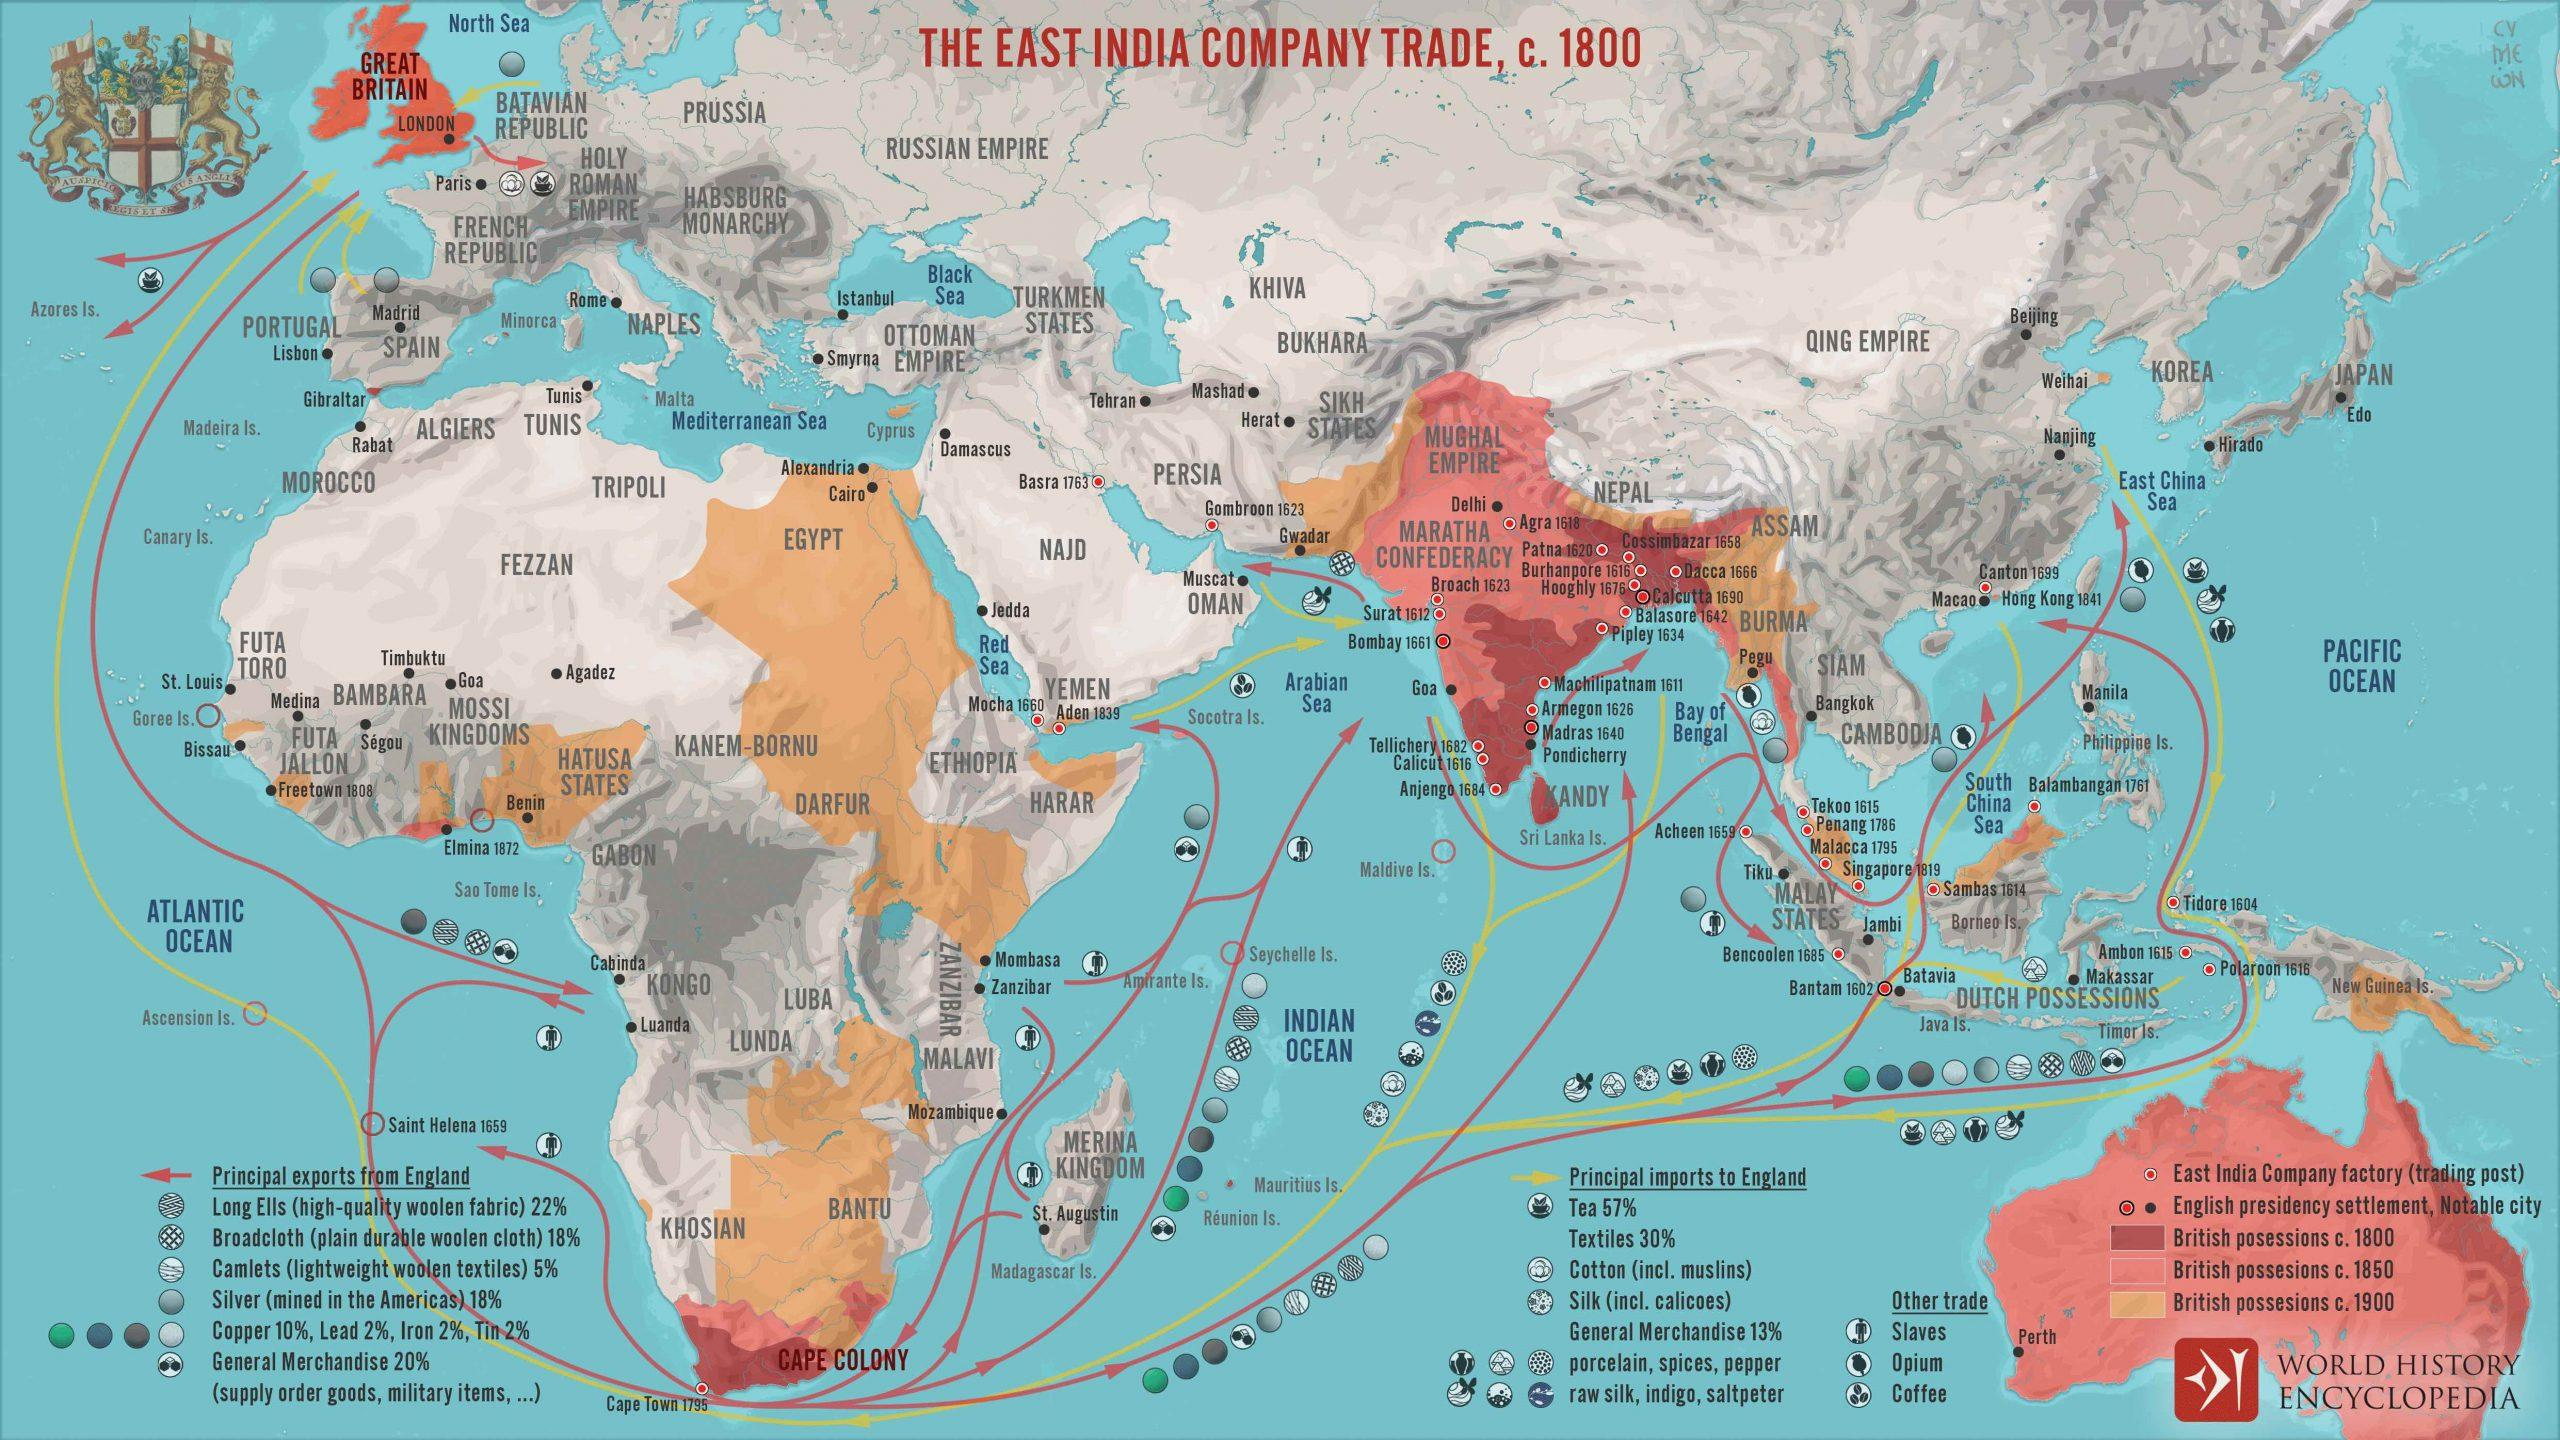

Seven Years' War, worldwide series of conflicts fought from 1756 to 1763 for the control of Germany and for supremacy in colonial North America and India. It involved most of the major powers of Europe, in particular Prussia, Great Britain, and Hannover on one side and Austria, Saxony (Sachsen), France, Russia, Sweden, and Spain on the other. The North American segment of the conflict, known as the French and Indian War, involved Great Britain and its American colonies against the French and their Algonquian allies. The Indian phase, known as the Third Carnatic War (see Carnatic Wars), established British domination in India.

De-industrialization in East Industrialization in West

By the turn of the nineteenth century, the industrial revolution in Europe—fueled by the 'geological luck' of accessible coal and the resources of the New World—had created a widening productivity gap between West and East. Some of the maps in our slides illustrate the resulting territorial contraction of the Muslim world and the rise of European imperialist spheres.

The most devastating impact of European industrialization was felt in the textile industry, which had been the backbone of the Ottoman and Mughal economies for centuries. Hand-loomed fabrics from Cairo, Aleppo, and Bengal could no longer compete with the mass-produced, steam-powered production of British factories. As cheap European imports flooded Eastern markets, traditional guild-based industries collapsed, leading to a period of rapid 'de-industrialization'.

Europeanization of the World at the Beginning of the Twentieth Century

Africa after the Berlin Conference

The Dismantling of the Eastern Order

The final phase of the transition from East to West is depicted in these last Maps, showing European imperialism and the Muslim world circa 1920. The collapse of the Ottoman Empire after World War I represented the final dismantling of the land-based Islamic imperial order that had existed for many centuries.

In the vacuum left by the empire's disintegration, the victorious Allied powers introduced an 'artificial nation-state' system into the Middle East. The Sykes-Picot Agreement (1916), signed in secret between Britain and France, divided the Ottoman provinces of Syria and Mesopotamia into colonial spheres of influence. This secret design was later formalized at the San Remo Conference (1920), which established the League of Nations Mandate system.

Resources Exploitation and the Colonial Legacy

Under the San Remo mandates, Britain assumed control of Palestine and Mesopotamia (Iraq), while France assumed control of Syria and Lebanon. These borders were often drawn without concern for the lands and peoples involved, cutting through religious and ethnic communities and creating minority populations that had no voice in their own self-determination. David Fromkin notes in A Peace to End All Peace that the European powers believed they could "change Moslem Asia in the very fundamentals of its political existence," replacing traditional religious and dynastic loyalties with Western-style nationalism.

Resources Exploitation and the Colonial Legacy

The mandates also laid the groundwork for future economic dynamics, particularly regarding the development of oil resources. The San Remo Agreement included a specific Anglo-French oil agreement, ensuring that France received a 25 percent share of the profits from the Mosul oil fields in exchange for allowing the region to be incorporated into the British mandate of Iraq. This secured Western access to the energy resources that would fuel the twentieth century, completing the transition of the East from the center of global wealth to a resource-rich periphery. The mandate era's economic logic, as seen in the San Remo oil agreement, was part of a broader pattern of Western powers securing control over the Middle East's strategic resources.

Resources Exploitation and the Colonial Legacy

Simultaneously, the mandate framework facilitated Western occupation and control over other strategic assets, such as Iranian oil and the Suez Canal, further entrenching the region's transformation from a center of wealth to a resource-rich periphery.

A British national, William Knox D'Arcy, secured a 60-year oil concession from the Iranian government in 1901, granting Persia a mere 16% of the annual profits. The company he formed became the Anglo-Persian Oil Company (APOC). In 1914, the British government acquired a controlling 51% stake in APOC, effectively nationalizing the company to secure fuel for its Royal Navy, which was transitioning from coal to oil. For decades, Britain maintained a stranglehold over Iran's most valuable natural resource, leading to widespread Iranian resentment and a powerful movement for nationalization, which was ultimately crushed in a 1953 CIA-led coup after Iran's democratically elected prime minister attempted to reclaim the nation's oil wealth.

Resources Exploitation and the Colonial Legacy

- Similarly, the Suez Canal was a vital artery for Western trade and military projection, particularly for transporting oil from the Persian Gulf to Europe. By the 20th century, the canal was operated by the Suez Canal Company, a joint British-French enterprise. This foreign control, which excluded the Egyptian government, was a constant source of humiliation and economic grievance. It was not until 1956 that Egyptian President Gamal Abdel Nasser was able to nationalize the canal, an act that triggered the Suez Crisis, in which Britain, France, and Israel conspired to violently retake it.
- These cases, along with the British-controlled Iraq Petroleum Company (IPC), which dominated Iraq's oil industry for decades until nationalization in 1972, demonstrate a consistent pattern of the West to gain access to Middle Eastern energy and strategic waterways, often at the direct expense of local sovereignty and long-term political stability.

برفتد تا روش رزم از این کهن محفل
به فکر تازه برآمد خیرخواهان جهان

من از این بیش ندانم که کفن دزدی چند
بهر تقسیم قبور انجمنی ساخته اند

(کہا جاتا ہے کہ) دنیا کے بہی خواہوں نے نئی روش کی بنیاد رکھی ہے، تاکہ اس بزم کہن (دنیا) سے جنگ کا چلن ختم ہو۔ مگر میں اس سے زیادہ نہیں جانتا کہ چند کفن چوروں نے، آپس میں قبریں بانٹنے کے لیے ایک انجمن بنائی ہے۔

To the end that wars may cease on this old planet, the well wishers of the world have founded a new institution. So far as I see it amounts to this: A number of undertakers have formed a company to allot the grave

Perpetual Instability and Dependance

The same system of ‘mandates’ directly created the conditions for perpetual conflict in the Middle East, most notably through the establishment of a Jewish homeland in **Muslim Palestine**. The British Mandate for Palestine was unique among the mandates because it explicitly required the administering power to facilitate the creation of a ‘national home for the Jewish people’. This commitment, enshrined in the Balfour Declaration of 1917, was formally incorporated into the League of Nations mandate for Palestine in 1922. This British pledge was made despite the fact that at the time, the Arab population of Palestine constituted over 90% of the inhabitants, whose right to self-determination was effectively ignored. The decision to prioritize a Zionist project over the political aspirations of the native Arab majority sowed the seeds of the Israeli-Palestinian conflict. The resulting friction was immediate and sustained, leading to decades of intercommunal violence, revolts, and political strife throughout the mandate period (1920–1948). This foundational contradiction culminated in the 1948 Arab-Israeli War, a conflict that has defined the modern Middle East and remains a source of regional instability to this day.

ہے خاکِ فلسطیں پہ یہودی کا اگر حق

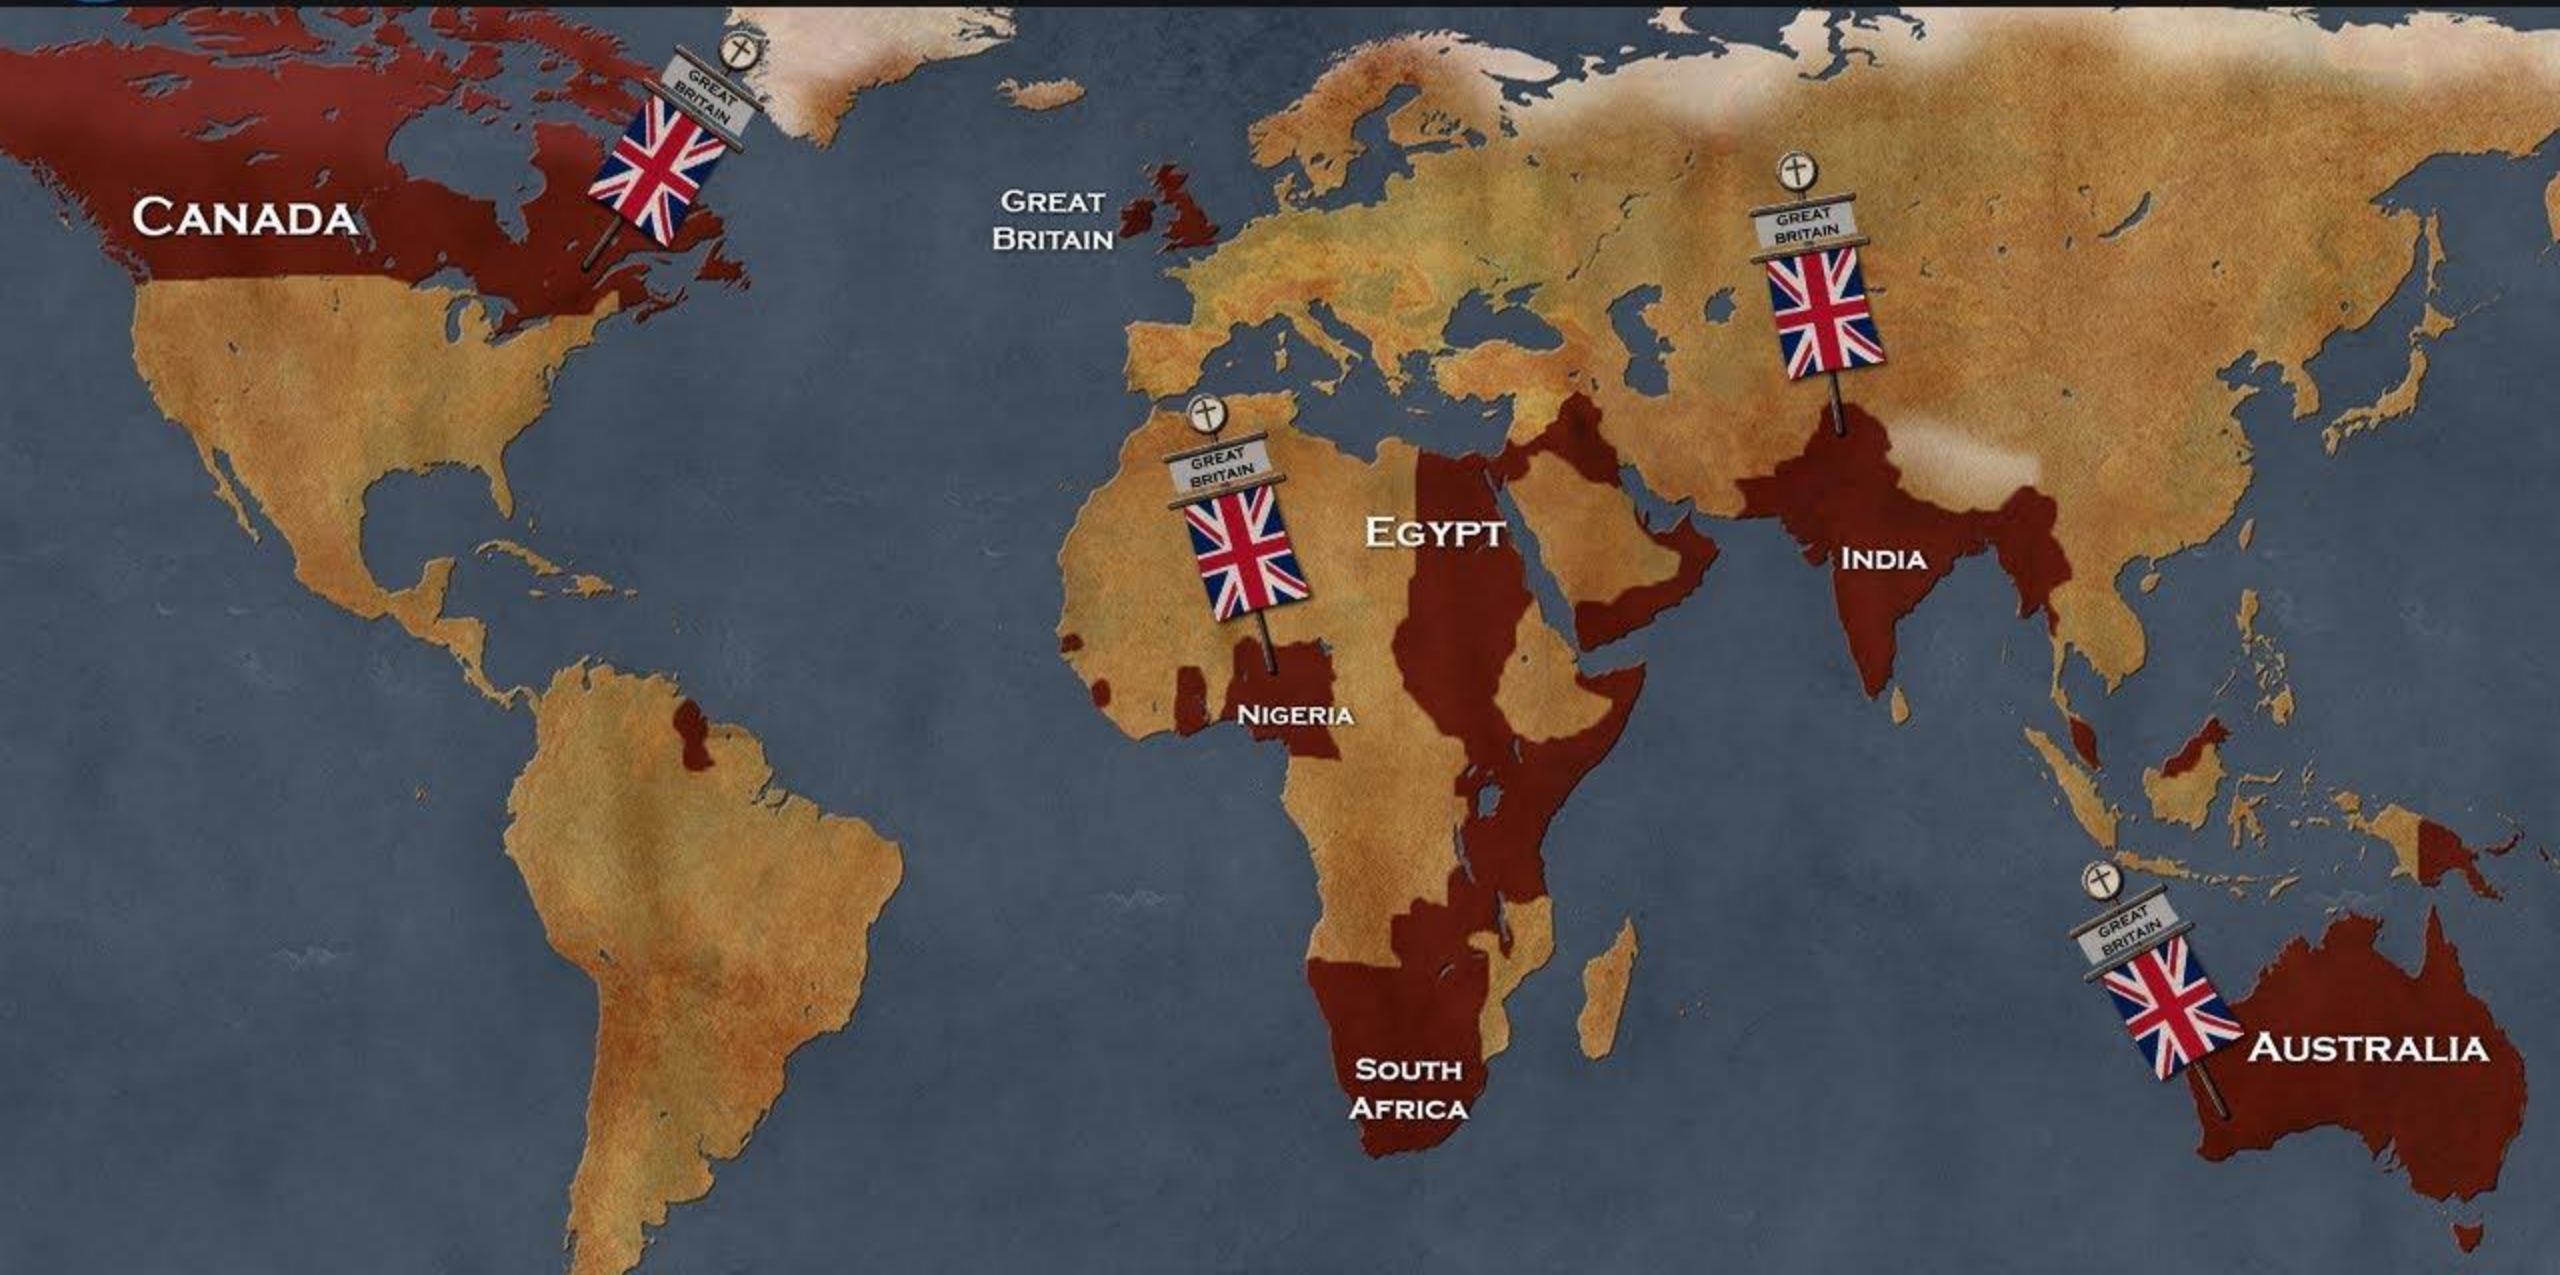

ہسپانیہ پہ حق نہیں کیوں اہل عرب کا؟

مقصد ہے ملوکیتِ افرنگ کا کچھ اور

یہ قصہ نہیں سنگ و سفال و عنب کا

HOW DID BRITAIN RULE THE WORLD?

Perpetual Instability and Dependance

The legacy of the 1920 settlement remains a defining feature of modern geopolitics. The replacement of Muslim self-rule under Islamic Law with European mandates and authoritarian regimes created a crisis of legitimacy that persists to the present day. As one of the maps shows, the distribution of the Muslim world in the late twentieth century remains fundamentally shaped by the borders drawn by the West. **And the cultural imperialism that accompanied the era of Western expansion is entirely another subject of importance to be discussed at some other occasion, or may be in another course.**
